SUBJECT INDEX

Adenylate cyclase, mitogenesis 163
Aging, NGF in brain 152
AIDS
  GM-CSF 7
  TNF 111
Alzheimer's disease, NGF 152
Amylin superfamily 99–105
  functional relationships 100
  genetic relationships 103
  structural relationships 100
Anaemia, erythropoietin 3
Angiogenesis, FGFs 221
AP1, abnormal growth control 69–77
Arthritis
  interleukin-6 133, 136
  TNF 111
Autoimmune disease, interleukin-6 136

B cells, interleukin-6 135
Bombesin 89, 91, 93, 94
Bone morphogenetic proteins 267–280
  assay 269
  developmental implications 276
  identification 270
  recombinant activities 271
  sources 268
  structure 273
Bradykinin
  biological effects 237
  formation and release 238
  mitogenesis 247
  pain 248
  signal transduction and second messenger systems 240
  synergy with other ligands 241
Bradykinin receptors 242
  agonist/antagonist studies 245
  G-proteins and transduction of signals 240
  ras protein p21 interaction 246
  regulation 245
Breast cancer, *int-2* 123
Bronchial epithelium, GRP 91, 94

Cachexia, TNF 110
Calcitonin gene-related peptides
  genes 103
  glycogen synthesis 100
  structure 101
Calcium channel, endothelin-1 201, 202
Cancer, TNF 110, 112, 123
Cartilage induction, bone morphogenetic proteins 271
Cartilage repair, FGF 224
Castleman's disease 134, 136
Chemotherapy
  G-CSF 7, 9
  GM-CSF 6, 9
Cholinergic neurons, NGF 144, 152
Colony-stimulating factors, clinical trials 2, 3
Corneal repair, FGF 224

Development
  bone morphogenetic proteins 276
  embryonic, FGF and TGF-β 82–85
  FGFs 222
  IGF expression 44
  IGF-BP-28 60
  NGF in CNS 148
  O-2A progenitor cells 179–194
Diabetes, amylin 100
Differentiation
  FGFs 221
  O-2A progenitor cells 179–194

Embryogenesis
  FGF and TGF-β 82–85
  int-2 125
Endothelin 195
  growth promoting activity 199
  identification and cDNA cloning 197
  mechanisms of action 200
  vasoconstriction 196
Endotoxic shock, TNF 108
Epidermal growth factor 13
  NMR structure 15–20
  synergy with bradykinin 241
Epidermal growth factor receptor 17
  autophosphorylation domain 27
  biosynthesis and degradation 24
  dimerization 29
  extracellular region 25
  glycosylation 24
  phosphorylations 29
  related proteins 25
  tyrosine kinase domain 26
Erythropoietin, clinical trials 2
Extracellular matrix, FGFs 220
Eye-derived growth factor 224

Fibroblast growth factors 207
  angiogenesis 221
  biochemical properties
    acidic 79, 212
    basic 79, 209
  biosynthesis 219
  development 222
  distribution 218

embryogenesis 82–85
extracellular matrix 220
heparin interaction 215
int-2 128
mitogenesis and differentiation 221
O-2A progenitor cell division and differentiation 185, 189
oncogenes structurally related to 213
receptors 216
tumor growth 224
wound healing 223
Fibroblast growth factor-5 81, 214, 219, 225
Fibroblast growth factor-6 215
Fibroblast growth factor receptors 216
fos, AP1 72

Gastrin-releasing peptide, pathogenesis of lung cancer 89–97
Gastrin-releasing peptide gene-associated peptides 90, 92
Gastrin-releasing peptide receptor, intracellular signalling pathways 93
Gene structure, IGF 33–48
G-proteins
in mitogenesis 162–173
endothelin-stimulated 201
transduction signals from bradykinin receptors 240
Graft versus host disease, TNF 111
Granulocyte colony-stimulating factor, clinical trials 7, 9
Granulocyte–macrophage colony-stimulating factor, clinical trials 4, 9
Growth hormone, regulation of IGF-binding protein production 56, 58

Haemopoiesis 1
TNF 112
Haemopoietic growth factors, clinical trials 1–12
Heparin, FGF interactions 208, 215
Hippocampus, NGF 144, 146, 150
HIV, TNF 111
hst 124, 214, 219, 225

Inflammatory joint disease, TNF 111
Inositol phosphates
endothelin-stimulated mitogenesis 199
G-proteins and mitogenesis 162, 166, 170
PDGF 260
Insulin, synergy with bradykinin 242
Insulin A-chain, amylin superfamily 100
Insulin-like growth factors 49
binding proteins
biological roles 61
clinical studies 58
detection and assay 50
purification and characterization 52
regulation of production *in vitro* 56
gene structure 34–44
genetic relationships 103
glycogen synthesis 100
regulation of expression in normal and malignant growth 44
structural relationships 101
Int-2 123
embryogenesis 125
FGF 128, 213, 219, 225
predicted products 127
structure of RNAs 126
Interleukin-1, synergy with bradykinin 241
Interleukin-3 10
Interleukin-6
B cell growth and differentiation 135
plasma cell neoplasias 136
plasmacytosis 133–136
structure and function 134
Interleukin-6 receptor 138

jun, AP1 72

K-*fgf*, FGF 214, 219, 225

Leucopaenia, GM-CSF 7
Lung cancer, GRP in 89–97

Mitogenesis
bradykinin 247
endothelin 199
FGFs 221
G-proteins and second messengers 161–177
Mouse mammary tumour virus, *int-2* 123, 213
Multiple sclerosis, O-2A progenitor cells 192
Myelin, repair and O-2A progenitor cells 192
Myelodysplastic syndrome, GM-CSF 6
Myeloid growth factors, clinical trials 3
Myeloma, interleukin-6 134, 137

Nerve growth factor 143–159
age-related changes in brain 152
alteration following CNS lesions 150
Alzheimer's disease 152
antibody detection in brain 146
clinical application in neurodegenerative disease 154
effect on CNS neurons 148
developmental regulation in CNS 148
mRNA in CNS 145
Nerve growth factor receptor, in CNS 147
age-related changes 152
alteration following lesions 151
developmental regulation 148
Neurodegenerative disease, NGF in brain 152, 154
Neuronal differentiation and survival, FGFs 222
NMR, structures of EGF and TGF-α 15–20

Oligodendrocyte-type-2 astrocyte progenitor cells 179–194

Oncogenes, AP1 activation 69–72
Optic nerve, O-A2 progenitor cells, division and differentiation 179–194
Osteogenin 271
Osteoinductive factor 271

Pain, bradykinin 248
Parkinson's disease, NGF 154
Phospholipase A2, G-proteins and mitogenesis 168
Phospholipase C
  endothelin stimulated 200, 201
  G-proteins and bradykinin 240
  G-proteins and mitogenesis 165, 168
  PDGF-induced activation 260
Phospholipase D, mitogenesis 170
Placental protein 12 52, 59
Plasmacytoma, interleukin-6 136
Plasmacytosis, interleukin-6 133, 135
Platelet-derived growth factor 173, 253
  O-2A progenitor cell division and differentiation 184, 189
Platelet-derived growth factor receptors
  biosynthesis, processing, internalization and degradation 255
  ligand-induced activation 258
  signal transduction 259
  structure 254
  transformation and tumorigenesis 261
Pregnancy, placental protein 12 59
Protein kinase C, mitogenesis 166, 169
Provirus integration 123

Raf-1, PDGF 260
ras
  AP1 69
  bradykinin 246
Receptor recognition, model 18
Relaxin 100
Renal failure, erythropoietin 2
Rheumatoid arthritis, interleukin-6 133, 136

Sarafotoxins S6 197
Second messengers
  bradykinin 240
  mitogenesis 162–173
Shock, TNF 108
Signal transduction
  bradykinin 240
  PDGF 259
Small cell lung cancer, GRP 91, 93, 94
Somatomedins 33, 49
Stem cells 183

Transcription factors, AP1 69
Transformation
  AP1 70
  PDGF receptors 261
Transforming growth factor α 13
  NMR structure 15–20
Transforming growth factor β
  biochemical properties 81
  bone formation 271, 274
  embryogenesis 82–85
Tumor growth, FGFs 224
Tumorigenesis, PDGF receptors 261
Tumor-mediated angiogenesis, FGF 222
Tumor necrosis factor, clinical applications 107–117
  antiviral action 111
  cachexia 110
  cancer 112
  combination therapy 116
  endotoxic shock 108
  graft versus host disease 111
  haemopoiesis 112
  inflammatory joint disease 111
Tyrosine kinase, EGF receptor 27

Vasoconstriction, endothelin 196

Wound healing, FGFs 223

Xenopus, FGF and TGF-β in development 82

Printed and bound in Great Britain by BPC-AUP Aberdeen Ltd.
